① あなたの原文

There are good points and bad points respectively.

First of all, in terms of good points, we can accelerate the speed of transaction which means that you can do communication easily and you can do task faster due to globalisation. If we communicate with other people who have the global style, we can easily and faster communicate each other. And also, we can understand each other more deeply than other style.

On the other hand, there are some bad points. So, if we have the globalisation, culture of local or rural area may be in risk of dissapperment. For example, I have heard of that bad points from people who lives Africa on YouTube. And also I have noticed some statistics show that the number of languages are decreasing as time goes by. So, this is also one of the problem attributed from globalisation.

In summarization, there are good points and bad points respectively. Maybe, if we accelerate more globalization, but we have the chance to produce some innovative idea discussing with each other which is come from the good aspect of globalization, understanding of diversity. And also, the opportunities of interaction of other people is going to be increasing due to globalisation. That is a best idea I have come up with. Otherwise, we better do not declare and accelerate the globalisation. In order to vitalize the opportunities of globalisation, we better do conversation from all over the world speaking common language, for example, English that leads to world's development.

② 自然な表現

There are both good points and bad points.

First of all, one good point is that we can accelerate the speed of transactions, which means that we can communicate more easily and complete tasks more quickly due to globalisation. If we communicate with other people who have a global mindset, we can communicate with each other more easily and efficiently. In addition, we can understand each other more deeply than we could with people who have different perspectives.

On the other hand, there are some drawbacks. If we promote globalisation, the cultures of local or rural areas may be at risk of disappearance. I have heard about these drawbacks from people who live in Africa on YouTube. I have also noticed that some statistics show that the number of languages is decreasing over time. So, this is also one of the problems attributed to globalisation.

In summary, there are both advantages and disadvantages. If we further accelerate globalisation, we will have more opportunities to produce innovative ideas by discussing them with one another. This is one of the positive aspects of globalisation because it promotes an understanding of diversity. In addition, opportunities for interaction with other people will increase due to globalisation.

That said, we should not promote and accelerate globalisation without care. In order to maximise its benefits, we should communicate with people from all over the world by speaking a common language, such as English, which can contribute to global development.

✍ Some people believe that everyone should adopt a vegetarian diet. To what extent do you agree? Give reasons and examples.

① あなたの原文

It is difficult to answer to that because this problem is sensitive. I believe in this problem is going to be treated as a kind of a religion issue. I could some agree to this thought of vegetarians from that aspect. I am going to state this reason for my idea.

Fist of all, I describe about this issue from aspect of religion problem. For example, Almost of all muslims do not have porks because of aspetct of religion issue. And also hindees do not eat porks and beefs. In that sense, the thinking way of vegetarians is simillar to the regilion issues representative for muslims and hindees.

Secondly, this problem could be thought from the perspective of era. I wonder there has been lots of vegetarians since long times ago. Global problem such as global warmings and environmental dicernings have been discussed lately. In that sense, the idea of vegetarians could be thought as a relevant issue to that global problem. Under affects of the propagation of the internet, this vegetarians problem has been discussing more frequently. Whether vegetarians or not is a trivial problem I think. But when some people see and meet the vegetarians's idea via internet who are not familiar with that idea, discussion between vegetarians and not are vitalised.

Lastly, the aspect of eating meets of animals is too highlighted to discuss. We have been appreciated when we eat food in Japan since long times ago. The reasons for attention of vegetalisms maybe come from lack of appreciation. Today, methods in the field of technology such as delivery tasks and plantation, farming, and live stocks are very mature comparing to the very old era. So, maybe discussion of vegetalisms is good opportunity to re-think the importance of food inculuding both of animals and vegetables in this era.

② 自然な表現

It is difficult to address this issue because it is sensitive. I believe this matter can be viewed through the lens of religious beliefs. From this perspective, I can somewhat agree with the thoughts of vegetarians. I will state the reasons for my opinion.

First of all, I will describe this issue from a religious standpoint. For example, almost all Muslims do not consume pork because of religious beliefs. Similarly, Hindus do not eat pork or beef. In that sense, the way of thinking of vegetarians can be compared to the religious beliefs of Muslims and Hindus.

Secondly, this problem can also be examined from a historical perspective. There have been many vegetarians for a long time. Global problems such as climate change and environmental concerns have been discussed lately. In this context, vegetarianism can be viewed as a relevant response to these global challenges. With the proliferation of the internet, discussions about vegetarianism have become more frequent. Whether one chooses to be a vegetarian or not is a personal decision. Still, when those unfamiliar with the idea encounter vegetarians online, it stimulates important discussions between the two perspectives.

Lastly, the topic of eating animal meat deserves attention. In Japan, we have long expressed gratitude for the food we consume. The rising focus on vegetarianism might stem from a lack of appreciation for our food sources. Today, advancements in technology, such as delivery services, agriculture, and livestock

management, are more developed than in the past. Therefore, discussing vegetarianism presents a good opportunity to rethink the importance of food, including both animal meat and vegetables, in this era.
